ABOUT ME

I am a Computer Engineering student who is detail-oriented and impact-driven, combining controlled perfectionism with long-term thinking. I prioritize efficiency by working fast while maintaining quality, and I continuously research technologies to ensure the best fit for each project. I am also a fast learner, able to adapt quickly to new tools and challenges, with a strong interest in full-stack development.

EDUCATION

Universitas Islam Kediri, Kediri Sep 2023 – Present
On Going 4th Semester, Computer Engineering
GPA 3.92 of 4.00

EXPERIENCE

Frontend Engineer, Internship 23 Juni 2025 – Present
PT Digdaya Olah Teknologi Indonesia

- Contributed to the development of a frontend boilerplate as a foundation for building scalable web applications.
- Assisted in research and structuring reusable UI components and configurations to improve development efficiency.
- Resolved bug issues in the internal Admiral library when integrated into projects.

Teaching Assistant, - Algorithm and Programming Maret - Juni 2025
Computer Engineering at Universitas Islam Kediri
Assistant Lecturer

- Assist the main lecturer in preparing course materials and evaluating student assignments, practice, and coding exercises.
- Lead practical class sessions, provide guidance to 20 students per week, and support their understanding of programming fundamentals

CERTIFICATIONS

Backend Development - Dicoding Sep 2024
Develop Backend Application with Hapi and Native Node JS

Frontend Development - Dicoding Sep 2024
Develop Web Application with React

Javascript Developer - Dicoding Sep 2024
Programing with Javascript

Problem Solving - Hackerrank Jan 2025
Basic Problem Solving

PROJECTS

Trivia Quizz

Mei 2025

Developed a web-based quiz application as part of an internship assessment at Digdaya Olah Teknologi Indonesia, showcasing frontend engineering skills from logic to user experience.

- Integrated Trivia Database API with state management for questions, answers, and scoring.
- Designed a responsive, user-friendly interface ensuring smooth quiz interactions.
- Implemented structured, maintainable code aligned with modern frontend practices.

Point Of Sales

Mei 2025 - Present

Developed a full-stack web-based Point of Sales (POS) application using React and NestJS, applying the complete Software Development Life Cycle from design to testing.

- Implemented advanced table management and real-time POS calculations for discounts, taxes, profits, and returns with high precision numeric.
- Built product management, transaction workflows, and analytics dashboard with a relational database and Role-Based Access Control (RBAC).
- Applied structured SDLC approach with system design diagrams and comprehensive testing.
