ABOUT ME

Computer Engineering student specializing in Software Engineering with strong experience in the React and Vue ecosystems. I quickly adapt to new technology stacks and focus on building scalable, maintainable frontend systems with modern tooling. Passionate about web engineering and continuously improving my understanding of full-stack architecture.

EDUCATION

Universitas Islam Kediri, Kediri Sep 2023 – Present
On Going 6th Semester, Computer Engineering
GPA 3.87 of 4.00

EXPERIENCE

Teaching Assistant, - Database Maret 2026 - Present
Computer Engineering at Universitas Islam Kediri
Assistant Lecturer

- Improved student comprehension of database and programming concepts by mentoring practical lab sessions and guiding 20+ students per week through hands-on coding exercises and debugging.
- Increased assignment quality and technical understanding by assisting lecturers in evaluating student submissions and providing structured feedback on implementation and logic.

Frontend Engineer, Internship 23 Juni 2025 – Present
PT Digdaya Olah Teknologi Indonesia

- Improved maintainability and scalability of a legacy tax monitoring system by migrating the frontend to a modern React architecture and rebuilding complex filtering, search, and action workflows using React, Ant Design, and TanStack Query.
- Extended a client procurement platform by implementing PR–BID deviation logic, enabling the system to handle discrepancies between purchase requests and vendor bids within procurement workflows.
- Developed a dashboard for procurement operations, allowing users to monitor key procurement states and workflow progress through structured data presentation.

Teaching Assistant, - Data Structure Oktober - Desember 2025
Computer Engineering at Universitas Islam Kediri
Assistant Lecturer

- Supported student understanding of core data structure concepts by mentoring practical sessions and assisting with algorithm implementation exercises.
- Improved problem-solving skills among students by guiding structured debugging and code review during laboratory sessions.

Teaching Assistant, - Algorithm and Programming Maret - Juni 2025
Computer Engineering at Universitas Islam Kediri
Assistant Lecturer

- Assist the main lecturer in preparing course materials and evaluating student assignments, practice, and coding exercises.
- Lead practical class sessions, provide guidance to 20 students per week, and support their understanding

CERTIFICATIONS

Backend Development - Dicoding

Sep 2024

Develop Backend Application with Hapi and Native Node JS

<https://www.dicoding.com/certificates/JLX17NW1NX72>

Frontend Development - Dicoding

Sep 2024

Develop Web Application with React

<https://www.dicoding.com/certificates/53XEO6V0KZRN>

Javascript Developer - Dicoding

Sep 2024

Programing with Javascript

PROJECTS

NestJS Backend Boilerplate

Oktober 2025

Developed a production-ready backend boilerplate using NestJS, designed to accelerate development of scalable REST APIs with clean architecture and strong security foundations.

- *Implemented authentication and authorization mechanisms with **RBAC**, enabling fine-grained access control across application modules.*
- *Applied **Domain-Driven Design** architecture combined with the **Repository Pattern** to ensure maintainable domain logic and clear separation of concerns.*
- *Integrated core NestJS features including **Guards**, **Filters**, and **middleware layers** to standardize request validation, error handling, and security enforcement.*
- *Structured the project as a reusable backend foundation suitable for rapid development of enterprise-grade API services.*
- *Built a complete **testing strategy including unit tests and end-to-end (E2E) tests** to validate business logic, API behavior, and system integration.*

Trivia Quizz

Mei 2025

Developed a web-based quiz application as part of an internship assessment at Digdaya Olah Teknologi Indonesia, showcasing frontend engineering skills from logic to user experience.

- Integrated Trivia Database API with state management for questions, answers, and scoring.
- Designed a responsive, user-friendly interface ensuring smooth quiz interactions.
- Implemented structured, maintainable code aligned with modern frontend practices.

Repository: <https://github.com/abyalax/Project-Test-DOT-Indonesia/>

App : <https://trivia-quiz-cast.vercel.app/>

Point Of Sales

Mei 2025 - Present

Developed a full-stack web-based Point of Sales (POS) application using React and NestJS, applying the complete Software Development Life Cycle from design to testing.

- Implemented advanced table management and real-time POS calculations for discounts, taxes, profits, and returns with high precision numeric.

- Built product management, transaction workflows, and analytics dashboard with a relational database and Role-Based Access Control (RBAC).
- Applied structured SDLC approach with system design diagrams and comprehensive testing.

Repository: <https://github.com/abyalax/point-of-sales>
App : <https://github.com/abyalax/point-of-sales>

CMS and Profile Web GenBI UNISKA

Mei 2025

Developed a web profile and CMS for GenBI using Next.js and TypeScript, focusing on SEO optimization and secure content management.

- Built dynamic landing pages and an integrated admin dashboard with NextAuth authentication and MySQL database.
- Implemented efficient member, executive, and news article management with structured workflows.

Repository: <https://github.com/abyalax/point-of-sales>
App : <https://github.com/abyalax/point-of-sales>

TOOLS

- Visual Studio Code
- Agentic AI Tools like cursor, copilot, windsurf, etc
- Docker and WSL
- Git | Gitlab | Github
- Playwright | Jest | Postman
